Stratis Group Ltd, a blockchain development platform provider, recently launched its Cirrus Sidechain Masternodes and Stratis Smart Contracts in C#. With these tools, businesses and developers will be able to execute smart contracts on the Microsoft.NET core architecture, according to a press release.

The Stratis Smart Contracts in C# eliminates the need for a new blockchain for every new decentralized app. Instead, businesses can develop a variety of smart contracts and deploy them on a single blockchain.

...

"At Stratis, we are committed to making it easy for businesses to adopt blockchain solutions for real-world use cases. Now, for the first time, enterprises and developers are able to build private blockchains and program Smart Contracts in their familiar C#...
